

Quantum Mechanics II: PHYS 314 (Spring 2021)
Quick quiz 7

Chris Monahan
William & Mary

Instructions

These quick quizzes are low-stakes assessment tools to help cement your understanding of our material. They will help you remember the key facts and can serve as a study guide to help you focus on material you are less familiar with. These quizzes do not contribute to your grade and are for your own use.

1. **Without looking at your notes or the textbook, and without consulting with your neighbour**, write your answer to each question in the **first column**.
2. Discuss with your neighbour and use your notes or the textbook as needed to answer each question and write your answers to each question in the **second column**. You should complete the second column, but do not add anything to your first column.

There are four questions.

Question 1

What is the relativistic dispersion relation? Sketch a derivation for this relation.

|

Question 2

Why is nonconservation of particle number a problem for our interpretation of quantum mechanics?

|

Question 3

Write down the Dirac equation. Explain what all the symbols mean.

|

Question 4

What is the difference between a four-component vector and a four-component spinor?

|
